**Alex Gillis**  
Circle K

At Gadsden Regional Medical Center, diagnostic imaging is used to create a graphic depiction of the structures and functions of the body's organs and other internal systems. These images are used to examine and diagnose certain medical conditions. Diagnostic Imaging includes x-rays which are invisible electromagnetic energy beams used to produce images of the internal tissues, bones and organs. At Gadsden Regional Medical Center we utilize a total of 6 Diagnostic Imaging rooms all operated by ARRT certified technologists. The Diagnostic Imaging department is open 24/7 at Gadsden Regional Medical Center.

At Gadsden Regional Imaging, our Diagnostic Imaging is open from 8:00am – 5:00pm Monday – Friday. To schedule an appointment, please contact Scheduling at (256) 494-4600

Our services:

**f** Ramie Anderson, Director Imaging & Cancer Center

**ELIMINATE**

Kiwanis eliminating maternal/neonatal tetanus

- Bone Densitometry
- Computerized Tomography (CT)
